Coefficients of seasonal capacity tariff :

Seasonal tariff = daily tariff of the considered capacity multiplied by a coefficient that varies from one month to the other (see table below) and by the subscribed number of days.

	(1)
January	2,6
February	2,5
March	2,0
April	1,7
May	1,2
June	1,0
July	0,7
August	0,7
September	0,9
October	1,5
November	2,0
December	2,4

This seasonal tariff is applicable for entry capacities, HP supply capacities, MP supply capacities, exit capacities to Loenhout, wheeling capacities and direct line capacities subscribed by the network users. This seasonal tariff is not applicable to HP and MP supply capacities to public distribution from the moment that the new implicit allocation mechanism will be applied.
