

Consultation 35: proposed changes in the regulatory documents

15 April 2019

Fluxys Belgium is proposing adjustments to its regulatory documents with a focus on (i) simplifying and aligning the L/H capacity service with the other substitution services, (ii) payment of the summary note indicating the balance to be paid to the TSO or to be reimbursed to the network user and (iii) compliancy with GDPR and some technical changes.

1. L/H capacity switch

Fluxys Belgium proposes to improve the L/H capacity switch service at three levels. For simplicity, the transfer of entry capacity from L-gas to H-gas will only be offered for the upcoming gas year (Y+1). In addition, the eligible quantity will be increased with an amount equal to the exit capacity of the converted end user domestic exit points. And finally, the process will be aligned with diversion and capacity conversion services by removing the obligation to surrender the capacity to be switched.

2. Invoicing

Fluxys Belgium proposes to communicate an overview of the consolidated invoices (total monthly fee(s) and/or the total monthly self-billing fee(s)) to the network users, including a summary indicating the balance to be paid to Fluxys Belgium or to be reimbursed to the network user. So network users don't have to pay any longer the total monthly fee(s) and Fluxys Belgium don't have to pay any longer the total monthly self-billing fee(s), but the summary of both invoices have to be paid by the owed party.

3. Technical changes

Fluxys Belgium proposes to modify Art. 8 of attachment G in the Standard Transmission Agreement concerning the processing of personal data in compliance with GDPR. In addition, the term "Domestic Point" is from now on used as a coherent term in all regulatory documents. At last, 'VIP BE-NL' has been renamed to the official name 'VIP BENE'.
