

ALLOCATION DETAILS - NEW LAYOUT STARTING FROM ACTIVITY MONTH SEPTEMBER 2020!

Fluxys Belgium publishes preliminary and validated Allocation Details on its Electronic Data Platform, under the (private) Invoicing section.

The following changes will be applied on each set of Allocation Details (CSV files), both the preliminary as the validated, as from the activity month of September 2020. Allocation Details for an activity month August 2020 or earlier will still be based on the old and current layout.

- Grid User's Definitive Daily Allocation Form (DP002) : Renaming columns in the CSV report for data \geq 01/09/2020.
 - Column EEApr,d renamed \rightarrow EEAd,pr
 - Column EEA'pr,d renamed \rightarrow EEA'd,pr
- The figures for the allocations are currently expressed in kWh without decimals. In the new layout, the figures for allocations will contain 3 decimals, so that the sum of the hourly reports corresponds better with the daily and monthly reports.
- The proper meaning of the nominations of the hourly, daily and monthly reports will also be aligned. When simultaneously nominating Entry and Exit on a same Point (against different counterparties), also the Hourly and Monthly reports will now show these Entry and Exit nominations instead of a net of off both. This is already the case within the Daily reports. (This change only has an impact when nominating simultaneously in both directions).

Examples of these files are available under the Operational Information section, 'Examples Allocation Details new layout (valid as from activity month September 2020).
