# Connect

Being connected to as many sources as possible is vital, tomorrow as well as today. We're working closely with our partners to explore new horizons, set up new logistics chains and link our infrastructure to additional sources. That's how we reinforce the foundations for a climate-neutral future.

# Shipping wind and sun to Northwest Europe

A robust European hydrogen market is open to as many sources as possible, which is why, with Fluxys, we are aiming for infrastructure with broad diversification potential. Infrastructure that not only unlocks local production on land, but also opens up the energy potential of the North Sea.

We are also exploring logistics chains with which we can bridge the gap worldwide to countries and regions with an abundance of sun and wind and from which green hydrogen or derivatives can find their way to Northwest Europe by ship. To this end, we are joining forces in the Hydrogen Import Coalition with Port of Antwerp-Bruges, DEME, ENGIE, EXMAR and WaterstofNet, among others.
